

ASBESTOS SURVEYS

ASBESTOS SURVEY?

A thorough asbestos survey should be conducted prior to any renovation or demolition project. The survey needs to be conducted by an EPA certified inspector to identify the location and quantity of asbestos contained in a facility.

WHAT WE CAN DO FOR YOU

The Empirical Company's surveys are intended to be a visual and minimally intrusive examination of the property. We identify suspect asbestos and take samples of the suspect material for a laboratory analysis to confirm the presence of asbestos. We then develop a detailed report of our findings and include all supporting documents and recommendations.

Surveys

We provide surveys that are conducted through a visual evaluation, classification and laboratory analysis of suspect asbestos-containing materials (ACBM) that have been used during the construction/remodeling efforts of the subject facility.

Samplings

Bulk samples of suspect asbestos-containing materials are collected in accordance with the guidelines as listed in 40 CFR Section 763.85 of AHERA.

Reporting

We develop detailed reports on our visual surveys of the accessible building materials known or suspected to have contained asbestos fibers.

Support

We also provide Litigation Support by translating highly technical, scientific information into real and practical terms. We have the ability to interpret technical information to assist attorneys by providing the best legal advice and direction on pursuing or settling litigation issues associated with asbestos and environmental issues.
